Professor Eyke Hüllermeier
Data Mining and Knowledge Discovery

Dear Professor Hüllermeier,

Internal cover-letter draft — not for submission.

Re: manuscript 1e58c388-d7ec-4084-b792-df20a48e3e75, “Baseline-Relative Predictability Horizons for Cross-Domain Forecast Evaluation.”

We thank you and the Reviewers for your constructive assessment. The working revision clarifies relaxed and strict horizon semantics, their possible operational use and the conditions needed to avoid adaptive selection bias. Figure references and presentation, target units and methodological reporting have been revised. Unsupported ARIMA comparisons have been withdrawn. Additional baseline and loss diagnostics are documented with their precise experimental version and support.

The revision is still undergoing input-validity and version reconciliation. We will not describe it as complete, assert approval by all authors or claim that all requested analyses are finished until those checks and author review are complete. The final letter will accompany the clean manuscript, the point-by-point response and the approved reproducibility package.

Thank you for the opportunity to revise our work.

Sincerely,

Federico Garcia Crespi
on behalf of the authors
